Drain Plug Models: If your compressor has a drain plug, it must be used to fill the compressor.

No Drain Plug Models: Remove the fitting caps (or manifold shipping plate) and set the compressor so the opened fittings are pointing up. Take notice of the location of the suction port. This type of compressor must be filled through the suction port.

After the compressor is filled with the recommended oil and capacity, pump the compressor by hand, 6 full revolutions (in either direction) before installing the compressor on the vehicle.

Compressor / System Refrigerant & Lubricant Specs

All oil specifications assume that A/C system has been properly cleaned, and new accumulator / filter drier has been installed. Specs are for total system capacities. Always refer to under hood decal as the primary source for refrigerant and lubricant information.
